

Table design v1

- **Manga List** Grid or list view showing manga covers. Clicking a cover expands into episode details or shows partial on the grid view.
- **Episode Details** Each manga episode card shows:
 - Chapters included
 - Corresponding anime episodes
 - Key story moments
 - Rating (stars or score)
 - Tags for filtering
 - Thumbnail previews
- **Series Overview** Banner or intro section:
 - Manga completed with 34 episodes/books
 - Each episode contains multiple chapters
 - Anime adaptation expands/reduces content (e.g., one manga episode → multiple anime episodes, or condensed scenes)
- **Search & Filter** Tags displayed prominently (characters, events, arcs) so users can quickly filter episodes.

My thoughts

- Use **cards** for each manga episode with cover art, tags, and ratings.
- Add a **toggle view** (list vs grid) for flexibility.
- Keep the **tags clickable** — they act as filters across the whole page.
- Consider a **timeline layout** to show how manga episodes map to anime episodes visually.
